

Neval Babu

Right to Work: UK (No sponsorship required) | Leicester | 07459875933 | Neval271@gmail.com

Portfolio: neval-babu-portfolio.netlify.app

SKILLS

Languages & Frontend: Python, Java, C++, JavaScript, TypeScript, HTML, CSS, React, React Hooks, Vite, Pygame

Backend & Data: Node.js, Express, Spring Boot, Spring MVC, Spring Security, PostgreSQL, MySQL, Redis, Prisma ORM, SQL, REST APIs, WebSockets, RSS, JWT, bcrypt

Testing, Cloud & Tools: Vitest, Integration Testing, Postman, Swagger/OpenAPI, Git, GitHub, GitLab, Docker, Microsoft Azure, Azure App Service, Azure Web PubSub, Netlify, Railway, Android Studio, Shell Scripting

Practices: Agile, Scrum, SDLC, Object-Oriented Programming, Responsive Web Design

EDUCATION

BSc (Hons) Computer Science | University of Leicester | First Class Honours (76+ %)

PROJECTS

IBM SkillsBuild Companion App

- Developed a gamified web application for IBM SkillsBuild within an 8-member team to create a more engaging learning experience
- Built backend services using Java and Spring Boot, implementing REST APIs to handle business logic and application functionality
- Configured a MySQL relational database for secure data storage and structured user management
- Led the Agile development process as Scrum Master, coordinating sprint activities and team progress to ensure project milestones were met
- Applied Spring Security to support secure authentication and controlled access to application features
- Utilised GitLab for version control and collaboration, supporting efficient teamwork and maintaining code consistency

PitchBrief - Personalised Football News Aggregator | www.pitchbrief.co.uk

- Developed a full-stack personalised football news aggregator using React, TypeScript, Node.js, Express and PostgreSQL, bringing club-specific articles from external RSS feeds into one responsive platform.
- Built Express backend functionality for authentication, favourite clubs and article bookmarks, using JWT-protected routes and bcrypt password hashing to secure personalised features.
- Designed relational PostgreSQL data models with Prisma ORM to provide structured storage for users, clubs, articles and bookmarks.
- Performed integration testing in Postman to verify backend requests, responses, authentication and error handling.
- Used Vitest to unit-test core functionality, helping identify regressions and confirm that individual features behaved as expected.
- Implemented a dual-deployment architecture with the React frontend on Netlify and the Express backend with PostgreSQL on Railway.

Portfolio Website | neval-babu-portfolio.netlify.app

- Developed a responsive portfolio using React, TypeScript and Vite, presenting my skills and software projects clearly across desktop and mobile devices.
- Structured the website with reusable React components and data-driven project content, making future updates simpler and keeping the interface consistent.
- Implemented active section navigation and persistent motion preferences, helping visitors explore the website easily and control how animations are displayed.
- Built accessible project galleries with keyboard navigation and smooth, stable image transitions, then managed and deployed the website using GitHub and Netlify.

Discover Flavour Web Application

- Built a responsive food-discovery website using HTML, CSS and JavaScript, demonstrating core front-end development without relying on a framework.
- Used JavaScript DOM manipulation and event handling to provide interactive client-side functionality across desktop and mobile layouts.

Private Cloud Whiteboard

- Distributed a shared, interactive whiteboard application across multiple Microsoft Azure App Service nodes
- Achieved persistent, low-latency connections by integrating Azure Web PubSub for WebSocket communication and Redis Cache for state synchronisation and rapid data retrieval
- Applied Docker containers to simplify horizontal scaling, allowing quick instance deployment during peak demand

Scrabble Game

- Built a modular desktop Scrabble game using Python, Pygame and object-oriented programming principles
- Developed player-versus-player and player-versus-computer modes with easy, medium and hard difficulty levels
- Integrated a DAWG data structure for efficient word validation and prefix-based dictionary searches
- Implemented rule-validation algorithms for tile alignment, board connectivity, first-move placement and multiword formation
- Optimised computer-opponent move generation by searching valid positions adjacent to existing tile
- Developed configurable game and turn timers with automatic passing and final-score calculation

WORK EXPERIENCE

Amazon Warehouse Associate | June 2021 - Present

- Processed and organised shipments with accurate sorting, packing, and labelling to ensure efficient order fulfilment and workflow operations
- Applied strong attention to detail and adaptability to maintain quality in a fast-paced working environment
- Collaborated effectively with team members to support daily productivity targets and operational efficiency
